

# Syllabus for MTH 532/632: Topology II (Differential Topology)

University of Miami, Spring 2026

[www.math.miami.edu/~cscaduto/teaching/532-spring-2026/](http://www.math.miami.edu/~cscaduto/teaching/532-spring-2026/)

## **Instructor:**

Prof. Christopher Scaduto

c.scaduto@math.miami.edu

Office: Ungar 525

Office hours: 8am-9am Tuesday, 10am-11am Thursday, or by appointment

- ◆ Class time and location: Tuesday and Thursday at 11:00-12:15, ??

## **References:**

*Differential Topology* by Guillemin and Pollack. Other references may be given throughout the course.

## **Description:**

Differential topology is the study of smooth manifolds, and focuses on the qualitative, i.e. topological, properties of such spaces. Specific topics covered include: Differential and topological manifolds, classical groups and associated manifolds, tangent and tensor bundles, vector fields, differential forms, transversality, Sard's theorem, Stokes' Theorem. Other fun topics will be included time-permitting.

## **Homework:**

Each week I will assign some homework problems. The problems will be listed on the course webpage. Your lowest homework grade will be dropped. Collaborating with your peers on homework assignments is permitted, but your solutions must be written up in your own words; identical homeworks will not receive credit. Homework will be accepted.

## **Exams:**

There will be two midterms and a final exam.

## **Grading:**

Homework is 25 % and each exam is 25 %.

Standard university policies are assumed for this course. See for example
